

Stellar – Custom turntable with Philips core

The inspiration for this model came from a unique type of dark gray acrylic sheet that turns white when lit. This creates a mesmerizing black-and-white light show. Upgrades to the original model include a turntable preamp and a Bluetooth transmitter. Simply connect the device to a power source and either your amplifier or wireless connection enable playing the music. The light show, featuring over 150 preprogrammed patterns, will captivate you. It's also an eye-catching sculpture, lamp, or light show by day, syncing with music from the turntable or any audio source.

Light effects are controllable via remote or mobile app, yet the true vintage charm lies in the spinning platter and manual start and play. The turntable is fully mechanical, from the 33/45 speed adjustment to the tonearm's return to the beginning at the end of a record. The 3D slipmat adds an artistic touch, perfect for display on your wall or turntable.

The Stellar Music & Light model is a remarkable creation, crafted for pure entertainment, designed to inspire bursts of vivid, colorful emotions. For orders and further details, use this link...!
